

## Highly Flexible, Instantly Available

Organizations are no longer asking “if cloud,” but “which cloud?” Determining what type of cloud solution is becoming increasingly difficult with the myriad of choices available today. Selecting the right cloud configuration requires thorough analysis regarding the level of security, control, customization and support your business requires.

### The Internap Solution

Internap's full range of OpenStack™ and VMware® public, private and storage services provides a comprehensive enterprise cloud offering – allowing you to future-proof your cloud investment with the ability to move across services as your control, security and cost parameters evolve. Knowing one size does not fit all, Internap has a cloud offering to match your changing requirements no matter where you are in the cloud continuum.

#### Private Cloud

Our Private Cloud provides the level of security, control and customization necessary for enterprises working with mission-critical data. If your organization is seeking the benefits of virtualization, our Private Cloud offers both guaranteed and reserved resource options. Private cloud is often a safe starting point for larger enterprises stepping into the cloud. For example, if your organization virtualized applications as part of an on-site server consolidation project, moving virtual machines (VMs) over to our Private Cloud is a good option.

#### Public Cloud

Our Public Cloud offers hypervisor choice with VMware and OpenStack to enterprises handling highly scalable workloads that require elasticity and usage-based billing. Our solution is a great fit for organizations seeking the benefits of virtualization with no up-front costs. Many new or Internet-focused organizations begin with public cloud and add private cloud later while more established organizations tend to add public cloud as a bursting option to support a private cloud configuration. If you have temporary needs for test and development instances from engineering or temporary marketing websites, the public cloud is a perfect fit. Our Public Cloud can spin up instances when you need them or turn them off when you don't and you only pay for what you use.

#### Cloud Storage

Our Cloud Storage solution was created with performance in mind. Located in secure Internap data centers, Cloud Storage offers unlimited storage capacity, on-demand access and utility billing. The OpenStack open source platform provides an extensive open API and a variety of tools to manage your data with the security you expect and the performance you require. Cloud Storage also includes a streamlined user interface that integrates into our CDN and is powered by our Performance IP™ service.

#### Cloud Hosting Benefits

- Improved performance from the cloud to your end user
- Integrated options to flexibly connect with other Internap infrastructure services
- Best-of-breed hardware solutions for your unique needs
- Increased flexibility, improved efficiency and enhanced security
- Unlimited capacity for both your day-to-day and unforeseen events
- Optimized application agility with on-demand provisioning

## The Internap Difference

Our cloud hosting solutions combine unmatched performance with complete IT platform flexibility. Leveraging our patented Managed Internet Route Optimizer™ (MIRO) technology, your traffic is directed over redundant, high-speed connections, dynamically linking you to the best performing Internet route at all times. Our Performance IP service and redundant data center architecture protects your business information, creating an enhanced experience for your end users. Internap's platform flexibility allows you to future-proof cloud investments, enabling the transition from one cloud platform to another as your priorities and business needs shift. When this flexibility is combined with the ability to move applications to a managed hosting or colocation service, Internap can create a highly-efficient IT Infrastructure for your organization. Our cloud portfolio provides secure solutions built on a foundation of superior performance, flexibility and cost savings. The result: an exceptional end-user experience with fewer abandoned sessions, increased revenue opportunities and unmatched reliability from one IT Infrastructure partner.

## Cloud Hosting Features

### Hypervisor Choice

Internap offers maximum choice with both VMware and open-source hypervisors. VMware, one of the industry's most trusted hypervisors, offers an excellent balance of security, flexibility and administrative maturity. Alternatively, use our open-source hypervisor option if you desire an open API with a lower cost profile.

### Premium Data Center Foundation

Our data centers are engineered to strict reliability standards so can rest assured your cloud will have maximum uptime. Our secure SAS 70 Type II audited facilities, conveniently located in major metropolitan areas, feature N+1 redundancy for both power and cooling to protect your valuable data.

### Patented Performance Network

Our cloud services connect to multiple major backbone providers through our patented route-optimization technology (MIRO). With the highest performing and most reliable network built in, your cloud is maximized for optimal uptime.

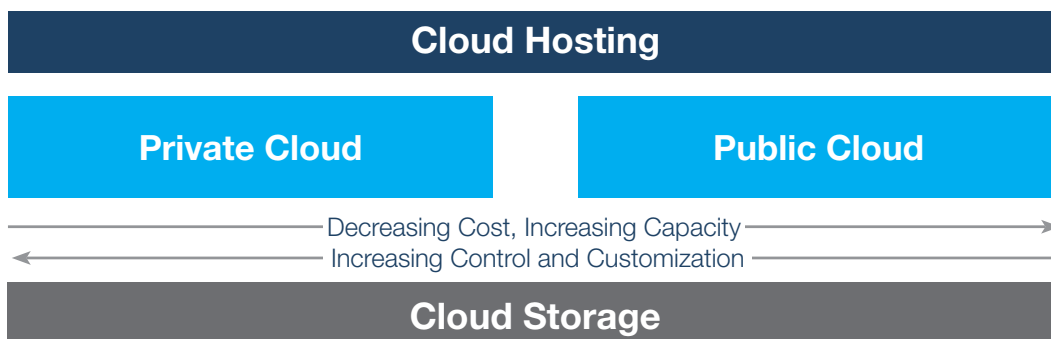

### Platform Flexibility

Internap's cloud services are an extension of our overarching intelligent IT Infrastructure platform. For enterprises that want to optimize for today and future-proof for tomorrow, we offer a full suite of infrastructure services including managed hosting and colocation. You can also leverage a mix of these services to build a customized hybrid solution in a single optimized IT environment to support your applications. Internap also links your services with Layer 2 connectivity creating a truly private network that delivers the highest level of performance and flexibility to your enterprise.

### Why Internap?

Transform your IT Infrastructure into a competitive advantage with IT IQ from Internap, intelligent IT Infrastructure solutions that deliver unparalleled performance, flexibility and support. Since 1996, thousands of enterprises have entrusted Internap to deliver their online applications across our platform of connectivity, colocation, managed hosting and cloud services.
