

Total Flexibility, Maximum Scale

A sudden spike in demand has overloaded your web application and you need to scale your infrastructure fast. You need control over your environment and the ability to make adjustments whenever necessary. You know private cloud solutions emphasize customization, but you need capacity now. After some research, you've determined public cloud is the right decision for large scale web applications with the flexibility to match your exact capacity requirements and costs. You've made your decision but are left wondering which public cloud platform is right for your business.

The Internap Solution

Internap offers custom and open public cloud solutions that provide cost effectiveness, flexibility and scalability to your business. Designed for the enterprise customer, a custom public cloud solution is ideal for organizations that need sophisticated management capabilities, while open public cloud is a better fit for organizations that want economic increments of cloud capacity. Ultimately, Internap provides a range of flexible IT deployment platforms giving you choice in your public cloud solution.

Enterprise Public Cloud Benefits

- Maximize unlimited capacity for both your day-to-day and unforeseen events
- Improve network performance from the cloud to your end user by leveraging our patented route optimization technology
- Optimize application agility with on-demand provisioning
- Experience flexible pay-as-you-go pricing or receive improved rates when you commit to additional usage

Custom Public Cloud

Internap's custom public cloud leverages industry leader VMware[®] while also providing built-in failover and advanced management features to help you architect tailored cloud configurations with customized Virtual Machine (VM) sizes. With our solution you gain compute resources allowing you to create on-demand advanced configurations through VMware's user-friendly vCloud™ Director portal. Additional functionality is available with vCloud's client connector, a plug-in to your local vCenter bridging internal and external VMware clouds making it simple to migrate your VMs.

Open Public Cloud

With Internap's open public cloud, you experience our most cost-effective solution with an easy-to-use management interface for both the IT and business professional. Based on the OpenStack™ framework, this solution eliminates cloud vendor lock-in, through an open standards management API and supplies an evolving ecosystem of partner applications. Internap's open public cloud is integrated with the cloud storage offering, for maximum flexibility.

The Internap Difference

Our public cloud solutions supply complete IT platform flexibility with a hybrid of IT deployment options. Leveraging our patented Managed Internet Route Optimizer™ (MIRO) technology, your traffic is directed over redundant, high-speed connections, dynamically linking you to the best performing Internet route at all times. Our Performance IP™ service and redundant data center architecture protects your business information, creating an enhanced experience for your end users.

We provide a secure enterprise public cloud solution built on a foundation of superior performance, flexibility and cost savings. The result: an exceptional end-user experience with fewer abandoned sessions, increased revenue opportunities and unmatched reliability.

Contact us to learn how Internap can solve your IT challenges by enabling you to focus on your core business, improve service levels and lower the cost of IT operations.

Enterprise Public Cloud Features

Platform Flexibility

Internap offers best-in-breed public cloud options with both the VMware and OpenStack platforms. VMware, the industry's most trusted hypervisor, offers an excellent balance of security, flexibility and administrative maturity. OpenStack provides open-source software that deploys flexible public and private clouds while eliminating vendor lock-in by uniting a robust ecosystem of third-party applications around an open API.

Premium Data Center Foundation

Our data centers are engineered to strict reliability standards so you are assured your cloud will have maximum uptime. Our secure SAS 70 Type II audited facilities, conveniently located in major metropolitan areas, feature N+1 redundancy for both power and cooling.

Patented Performance Network

Our cloud services connect to multiple major backbone providers through our patented route optimization technology. With the highest performing and most reliable network built in, your cloud is maximized for optimal uptime.

Why Internap?

Transform your IT Infrastructure into a competitive advantage with IT IQ from Internap, intelligent IT Infrastructure solutions that deliver unparalleled performance, availability and support. Since 1996, thousands of enterprises have entrusted Internap to deliver their online applications across our platform of connectivity, colocation, managed hosting and cloud services.

Selecting a Public Cloud Solution:

| | Custom Public Cloud | Open Public Cloud |
|----------------------------|--|---|
| Environment | Multi-tenant | Multi-tenant |
| Storage Type | Secure Multi-tenant SAN | Cloud Storage or Persistent Block Storage |
| Costs | Pay-as-you-go, with ability to define VM sizes | Pay-as-you-go with pre-defined VM sizes |
| Hypervisor | VMware Hypervisor | Open-source Xen Hypervisor |
| User Interface | vCloud Director | Internap Cloud Portal |
| Technology Partners | Cisco, EMC, VMware | OpenStack, Arista |
