

## Managed Unified Threat Management

*Getting and staying ahead of the 'vulnerability curve' is a challenge faced by many organizations. At the same time, business processes require organizations to provide access to mobile employees, partners, suppliers and customers. For a company to effectively and securely share critical information with remote users, it takes more than a firewall. Attackers are constantly evolving their network subversion methods to take advantage of these application vulnerabilities to compromise the services allowed through the firewall. The bar has been raised and simply adding the latest security hardware and software is no longer enough. With Internap® Managed Unified Threat Management (UTM) service, you receive a proactive and powerful network surveillance system that is configured, managed and updated on a regular basis by security experts.*

Key elements in deploying a comprehensive security plan require at the core the Internap Managed Unified Threat Management system, which includes a Managed Firewall/VPN, Managed Intrusion Prevention System (IPS), Gateway Anti-Virus, Anti-Spam and Content Filtering service with the following:

**Our Security Experts** become an extension of your in-house IT staff, providing best practices in security policy and configuration to allow the maximum level of security for your network.

**Managed Service** – our security experts will keep your UTM security appliances up-to-date with signatures, firmware and security patches as new vulnerabilities are discovered.

**Hardware Appliance** – FortiGate from Fortinet offers a high level of security at a very attractive price performance ratio, which is included with the Internap Managed UTM service.

**Flexibility** – Internap Unified Threat Management system can fit any network topology with little or no network changes.

**Granular Control** – Rule-based management provides ability to enforce strict compliance to corporate security policies.

**Reporting Portal** – Extensive auditing and logging capabilities that offer fully customized reports in easy-to-understand formats.

**Compliance** with regulatory and best practice requirements, such as FSA, DPA, Basel, ISO 17799, HIPAA, GLA and other regulations.

### Features

- Fully managed solution (24x7x365 protection and support)
- Implementation and configuration
- Security policy configuration
- Off-site back-up configuration storage
- Signature, firmware and security patch updates
- Policy changes within 24 hours
- Industry-leading Fortinet FortiGate appliance included
- Hardware replacement within 24 hours

### Benefits

- Cost effective – no need to hire security experts or train internal IT staff
- Granular control provides appropriate level of security
- Reduce time and cost associated with intrusions
- Fits any network topology with little or no network changes
- Proactively identifies and stops most network and application level attacks
- Reporting – portal provides user-friendly reports as well as detailed reports for regulatory compliance
